

Information Communication Technology

Vinehall School

2002-2003

In today's world the use of a computer is already an important skill. With this in mind Information Communication Technology is taught at Vinehall to help pupils develop their ICT skills now and for their future.

Through normal lessons and extra activities it is hoped that all pupils will leave Vinehall with an understanding and appreciation of the value and use of computers as a tool for learning. We aim to provide the opportunity to use many different software applications and develop knowledge of the basic hardware that children are likely to encounter at their public schools.

ICT has a place in the National Curriculum to give a good grounding for the future and it also encourages skills gained in ICT lessons to be used in other subjects to improve the presentation of work. This helps build pupils' confidence in the use of IT.
