

ICT

2004-05

The ICT department continues to move forward to allow both pupils and staff to develop their own skills and enjoy the use of IT equipment.

Over the summer break broadband internet access was installed, the Pre-Prep was networked and new computers are being installed in the first part of the Michaelmas term along with a scanner and colour laser printer. Also various other areas of the school will see their old computers replaced with new equipment.

The rolling plan for the introduction of interactive whiteboards and projectors continued with the history and maths departments benefiting this year.

Year 1 classes have now been allocated a timetable slot in the Prep school to allow for whole class teaching of IT.
