

ICT

The academic year started with the installation of a new server to provide increased storage for all users. This was just as well as by the end of the academic year one Gigabyte of data per week of this new storage was being taken up. There was also the introduction of a Skype phone for our overseas boarders and Gap students to make free phone calls to their relatives.

There will be further installations of interactive whiteboards over the next academic year with the Year 1 classrooms in the Pre-Prep and the remaining two French classrooms in the Prep school benefiting. Other smaller upgrades will be taking place to improve the already very reliable network.

The IT department welcomed Mr Taylor to the department as a technician to provide support alongside Mr Willard.

Many projects were completed over the last year by pupils and the Year 5 posters and menus stood out. The Year 8 non-Latin group also produced some excellent greeting cards from pictures taken around the school grounds which they altered with the photo software to create some interesting effects.
