

With Information and Communication Technology constantly advancing and improving there is always the challenge of keeping the school ICT infrastructure as up to date as possible, while still adding to the already impressive facilities we are lucky to have at our disposal.

Over the last year, various parts of the network which are out of sight, such as the network switches, have been upgraded. Installations of interactive whiteboards in the Year 1 and Prep French department classrooms were completed. A further seven classrooms benefited from the installation of interactive whiteboards over the summer holidays.

In the classroom, the pupils have continued to have the opportunity to use a wide variety of software to help in the development of their ICT skills. Year 3 have had an extra ICT lesson on Wednesday afternoons; this has allowed the introduction of some ICT topics, which they would not normally have an opportunity to experience until later in their time at Vinehall. *MH*
